

PHYO THANT KYAW

Chiang Rai, Thailand | +66 85 512 9146 | phyothantkyaw22.pku@gmail.com

[Portfolio](#) | [Github](#) | [Linkedin](#)

English: professional | Thai: basic | Burmese: native

Full-time MFU co-op: 4 Jan - 23 Apr 2027 | Open to relocation in Thailand

PROFILE

Fourth-year Computer Engineering student (GPAX 3.84) building ML and AI-assisted applications with Python, Java and TypeScript. Projects connect model outputs or rule evidence to clear interfaces and LLM explanations. Seeking AI integration or related software work with experienced engineers.

EDUCATION

Mae Fah Luang University - B.Eng., Computer Engineering | 2023 - expected May 2027

GPAX: 3.84 / 4.00. Required 16-week co-op; a longer placement can be discussed subject to MFU approval.

Mandalay Technological University - Electronics Engineering studies | 2016 - 2020

Completed through Year 3 before COVID disrupted the program; continued my degree studies in Thailand.

SELECTED PROJECTS

RiskDesk - Transaction Review / Independent Project [\[Github\]](#)

- Built Spring Boot REST APIs, rule analysis, PostgreSQL/Supabase persistence and a React/TypeScript interface; deployed the demo on Render with Docker.
- Linked findings to evidence transactions, added Gemini explanations and reviewer notes, and wrote technical documentation. Synthetic data only; the score prioritizes review and does not establish fraud.

MFU PM2.5 GeoAI Warning - Senior Project / Technical Lead [\[Github\]](#)

- Prepared and aligned PM2.5, weather and NASA FIRMS fire data; engineered features and built a Streamlit dashboard with maps and multilingual Gemini guidance.
- Compared weather-only and weather-plus-fire LightGBM models on the same chronological split. Burning-season RMSE improved from 7.3237 to 6.9878 ug/m3 across 120 held-out days in 2022. Current outputs are model estimates; future outputs are scenario projections.

AI Vision QC Inspector - Deployed Demo [\[Github\]](#)

- Built an image-classification demo with TensorFlow/MobileNetV2 and Gemini-generated reports. Recorded 89.4% validation accuracy after 5 epochs using 6,633 training images.
- Resolved Python/runtime, dependency and Gemini SDK migration issues during Streamlit deployment.

EXPERIENCE

Work Assistant - Web & AI Projects | MFU Learning Innovation Institute | May - Jul 2026

- Wrote requirements and built a Next.js/TypeScript nursing-learning UI prototype; reviewed the workflow with nursing lecturers.
- Designed the database/API structure and a hybrid rule-based and Gemini feedback approach. Full backend integration remains pending.

TECHNICAL SKILLS & CERTIFICATIONS

Programming: Python, Java, SQL, TypeScript | **Software:** Spring Boot, REST APIs, React, Next.js, Git

Data & ML: Pandas, data cleaning, feature engineering, LightGBM, XGBoost, scikit-learn, TensorFlow; Hadoop coursework

Platforms: PostgreSQL/Supabase, Streamlit, Docker, Render, Gemini API, Google Colab

Certificates: Google Data Analytics Professional Certificate; IBM Data Engineering Certificate
